

FARUKH MUMTAZ

DevSecOps Engineer · Security Researcher · Penetration Tester

farukhofficial555@gmail.com · linkedin.com/in/farukh-mumtaz · github.com/farukhmumtaz · Islamabad, PK

PROFESSIONAL SUMMARY

Security-focused Software Engineering student bridging offensive research with automated cloud defense. Identifies production-level authorization flaws in live SaaS environments while engineering self-healing, Zero-Trust infrastructure governed by Shift-Left Security and Infrastructure as Code principles.

EDUCATION & HONORS

BS Software Engineering — COMSATS University Islamabad, Wah Campus 2024 – 2028 (Expected)
· **Dean's Merit Award** · **2nd Position in University (1st Semester)** · **CGPA: 3.46 / 4.0**

HSSC (Pre-Engineering) — HCCS Educational System Annual Examination 2024
Score: 834 / 1100 · Grade A

SSC (Science) — APS EME College Campus Annual Examination 2022
Score: 1009 / 1100 · Grade A1

EXPERIENCE

Penetration Tester — GRNZ Tech September 2025 – Present

- Spearheaded SaaS Security assessments on Zoho and Atlassian, uncovering critical Broken Access Control (IDOR/BOLA) vulnerabilities in production multi-tenant environments—directly influencing authorization logic hardening across thousands of end-user accounts.
- Identified privilege-escalation paths by mapping object-level authorization gaps in REST APIs against OWASP API Security Top 10; delivered structured remediation reports adopted by development teams.
- Implemented post-patch validation cycles to confirm remediated authorization logic withstood re-exploitation attempts.

Independent Security Researcher — Bugcrowd Ongoing

- Audited production bug-bounty programs for logical and authorization flaws; reported critical IDOR and BOLA vulnerabilities impacting live user data in high-value SaaS targets.
- Specialized in multi-step business-logic flaws and Broken Object-Level Authorization (BOLA) chains that evade automated scanning tools.

PROJECTS

LLM Security Gateway FastAPI · Python · Microsoft Presidio

- Engineered a Zero-Trust middleware layer for LLM inference—integrating real-time Prompt Injection detection and PII Anonymization (Microsoft Presidio) to enforce Shift-Left Security at the AI request boundary.
- Achieved 100% detection accuracy at <50 ms latency; deployed as a standalone FastAPI service with structured audit logging.

AWS Security Guardian Python · Boto3 · Lambda · EventBridge

- Architected an event-driven, self-healing IAM remediation bot that autonomously detects and neutralizes unauthorized privilege escalation within milliseconds—eliminating manual incident-response lag entirely.
- Automated least-privilege policy enforcement; remediated IAM drift before it materialized into exploitable attack surface.

Sentinel API Gateway Node.js · PostgreSQL · Docker Compose

- Implemented Infrastructure as Code (IaC) via Docker Compose to provision a fully containerized, security-first microservice stack—reducing environment deployment to under 2 minutes with zero configuration drift.
- Enforced least-privilege network segmentation across all containers, eliminating lateral-movement risk within the deployment boundary.

TECHNICAL SKILLS

CI/CD & Automation: GitHub Actions · AWS Lambda · EventBridge · Boto3 · Docker · Docker Compose (IaC)

Cloud Security: AWS IAM · CloudTrail · Zero-Trust Architecture · Self-Healing Infrastructure · Least-Privilege

Offensive Security: Burp Suite Pro · OWASP API Top 10 · IDOR/BOLA Exploitation · SaaS Authorization Logic · Nuclei

Languages & Frameworks: Python · FastAPI · Node.js · PostgreSQL · Bash/Shell

Concepts: Shift-Left Security · Broken Access Control · Infrastructure as Code · DevSecOps · Multi-Tenant SaaS

LANGUAGES

English (Professional Proficiency) · **Urdu & Punjabi** (Native)
